Abstract

The purpose of this study is to investigate the effect of the type of the soil on the behavior of the soil during the consolidation process. The results of the study show that the type of the soil has a significant effect on the behavior of the soil during the consolidation process. The study was conducted using a series of experiments on different types of soil. The results of the study show that the type of the soil has a significant effect on the behavior of the soil during the consolidation process. The study was conducted using a series of experiments on different types of soil. The results of the study show that the type of the soil has a significant effect on the behavior of the soil during the consolidation process.
